DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/27/05 has been entered.

Election/Restrictions

2. Applicant's election without traverse of claims 8-19 in the reply filed on 8/24/05 is acknowledged.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 8-10, 12, and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Ma (2002/0114394) for the same reasons as set forth in Section 11 of the previous office action, dated 5/20/05.

With respect to the newly amended limitation, Figure 5 of Ma already illustrates the concept of such predicted search range ROS based on motion in any adjacent macroblocks arranged adjacent to the macroblock (O).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 11, 13-17, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ma in view of MPEG-4 Diamond Search Specification for the same reasons as set forth in Section 14 of the previous office action, dated 5/20/05.

Response to Arguments

8. Applicant's arguments filed 12/27/05 have been fully considered but they are not persuasive. Applicant asserts on pages 5-6 of the Remarks that Ma fails to disclose the

claimed selecting step. However, Figure 6 of Ma not only illustrate the predicted motion vector (predicted MV) and the predicted search range (r), the MAP and ARP also disclose the concept of selecting a starting search location among several available positions (e.g. MV and GMV).

Applicant also asserts on pages 7-8 of the Remarks that Ma fails to disclose the selecting step is based on two separate inputs. However, Figures 5 and 6 of Ma illustrate both such requirements. Namely the predicted motion vector (predicted MV) and the predicted search range as newly defined in claim 8 (Fig. 5).

Finally, applicant continues to assert on pages 7-8 of the Remarks that Ma fails to disclose selecting a search pattern. However, as previously addressed, Figures 2-4 of Ma illustrate various well known search patterns that may be selected for the search process.
